

I can't believe that radio is trying to squash Satellite Radio...XM radio is just the latest technology to bring us even better radio broadcasts! Just like FM radio stations brought us better stations (with less interference) than AM radio: satellite radio brings us even better coverage of the airwaves.

I can't believe the XM radio station coverage... It is so exceptional that besides CD's, the ONLY thing I listen to in the car is XM radio.

PLEASE don't inhibit the airwaves... This latest technology: like TV over AM, FM over AM, CD's over tape media--- only betters the listening experience
